CHIKU BROWN

A close-up photograph of a rock or mineral surface. The surface is covered in a dense pattern of small, dark, irregular spots (likely pyrite or magnetite) scattered across a lighter-colored, possibly quartz or feldspar, matrix. There are also some larger, more elongated, and less numerous dark streaks or veins running through the rock.

MANTA RED

The image shows a close-up view of a red granite surface. The color is a vibrant reddish-orange, with numerous small, dark grey and black speckles distributed throughout, giving it a mottled appearance. There are also some very faint, thin, light-colored veins or streaks running across the surface.
